

Clinical Studies

Study Case A: Breast Cancer Case Story

On June 25, 2018. The person (Female, Age 69) came, being rejected by hospitals as "Incurable."

- The breast cancer patient was given only 2 or 3 days to live by her Oncologist.
- The tumor size was 15cm (6 inches), about the size of a melon.
- The tumor was extending from the breast and had a very foul smell.
- Four in One Hand Wand therapy was applied on her spinal column daily.
- Lymphocytes began increasing in about 14 days, and the condition improved.
- Two weeks into the program, the tumor detached from the breast.
- The patient slept on Four in One Blanket on level 5 (48°C) for 30 minutes a day, reducing the heat to level 1 (38°C) or 2.

Tumor starting to disintegrate – 2 weeks later detached from the breast – 6 weeks later only small hole visible [please bear in mind that this is somewhat exceptional and usually it takes 3 to 6 months to reverse cancer]

Study Case B – Stage 4 Melanoma patient (Male)

- Four-In-One therapy began on June 12, 2013.
- Three weeks of daily spinal treatment and sleeping on the Four-in-One blanket.

- Three weeks later, Melanoma greatly improved, and in 2018, the patient was still doing very well.

Structure of Mat

Dr. Johanna Budwig was constantly talking about the benefits of sunlight and natural heat. As time goes on, more and more scientists are finding how she was ahead of her time in this research.

Scientific Studies Carried Out By NASA

Studies were being carried out in these fields by NASA as far back as the 1960s. A further study in 1981 confirmed that infrared rays of 2 – 25 μ of wavelength in the sunlight are necessary for life.

They also discovered that 4~14 μ of Far Infrared radiation is indispensable for metabolism, rejuvenation, healing, and growth. It's also essential to make heat and energy occur by a resonance action within cell molecules of the human body.

Raymond Rife, in the 1920's-30's, used this theory to produce a machine to destroy microorganisms with a resonant frequency or vibration called a frequency generator.

Reports have shown that it helps to:

- Boost the Immune System
- Provides FIR infrared 5-20 microns wavelength (the same as the KI emitted by the human body and like the sun, which is essential for every living cell)
- Penetrates deep into the body and corrects hormone imbalances
- Stimulates blood circulation
- Helps with Pain, fatigue, and stress
- Improved organ functions
- Rejuvenates cells and repairs degenerated cells
- Facilitates elimination

Helps with many common diseases such as:

- Arthritis
- Asthma
- Bladder issues
- Blood pressure
- Abnormalities of bones
- Various cancers
- Common cold
- Diabetes

- Digestive problems
- Dizziness
- Fibroid
- Hepatitis
- Kidney and liver issues
- Limes disease
- Parasites
- Parkinson's
- Stroke
- Thyroid problems
- Stress
- Various women's issues, and more.
